

Protect your Canvas with Canvas Guard

ClearShield Canvas Guard is the ideal coating for Gicleé canvas applications. Canvas Guard exhibits the flexibility required for stretching canvas without cracking the clear coat. It is formulated to work on micro-porous and porous ink jet receptive layers. ClearShield Canvas Guard can be applied using most techniques, and for automated liquid laminators we recommend using ClearShield Canvas Guard for the StarLam.

Properties

- **State of the art UV-inhibitors**
- **Protects from abrasion and marring**
- **Highly flexible and chemically resistant**
- **Non-yellowing**
- **Enhances color**
- **Available in gloss, semi-gloss, satin & matte**

Applications

- **Canvas**
- **Gicleé Prints**
- **Fine Art**
- **Wall Coverings**

ClearShield Liquid Coatings

ClearShield liquid coatings offer industry leading UV-protection, chemical resistance, and mar resistance. Our state of the art UV-inhibitors and HALS (hindered amine light stabilizers) provide superior protection for less. Long term UV stability is dependent on many factors including coating thickness, type of ink used, and the type of substrate coated.

Canvas Guard for the StarLam

For coating rolls of canvas on automated liquid laminators like Marabu's StarLam 1600R Liquid Laminator, we have developed **ClearShield Canvas Guard for the StarLam**, which offers the same flexibility for stretching and UV-protection as Canvas Guard with optimal performance on liquid laminators.
